

Climate Quest

Path to a Net Zero Future

YOU MADE IT! >

How to play

1. Each player begins with 4 pawns (1 for each category) and 1 shared dice. Use the pawns from other board games you have at home; tiny objects such as colored pebbles, paper clips or pennies will also do. Equally, borrow the dice from another game or use a virtual one at freeonlinedice.com.
2. Reflect on the questions in the Dreams and Nightmares section at the bottom of this board and familiarize yourselves with the 4 categories in the columns: Food, Transportation, Energy, Manufacturing by reading the descriptions.
3. Place your pawns on the bottom row (1 in each category) where it says "Start here". The youngest player rolls the dice first.
4. The dice indicates how many fields you can move up. With every roll you can only move 1 pawn up in 1 category. Choose the category wisely and follow the instructions in the fields you land on.
5. A player needs to roll the exact number to reach the top row where it says "You made it". If a higher number is rolled, the player will move back down.
6. If the instructions in a field say "move down" or "move up" the player has to move the pawn in that same category. The same goes for the second player who is invited to "move up" along with player one.
7. The player who has all 4 pawns at the top wins.

Best with: 2-4 players, 7-11 y.o.

START HERE >

Food

Producing and transporting food matters for Climate Change.

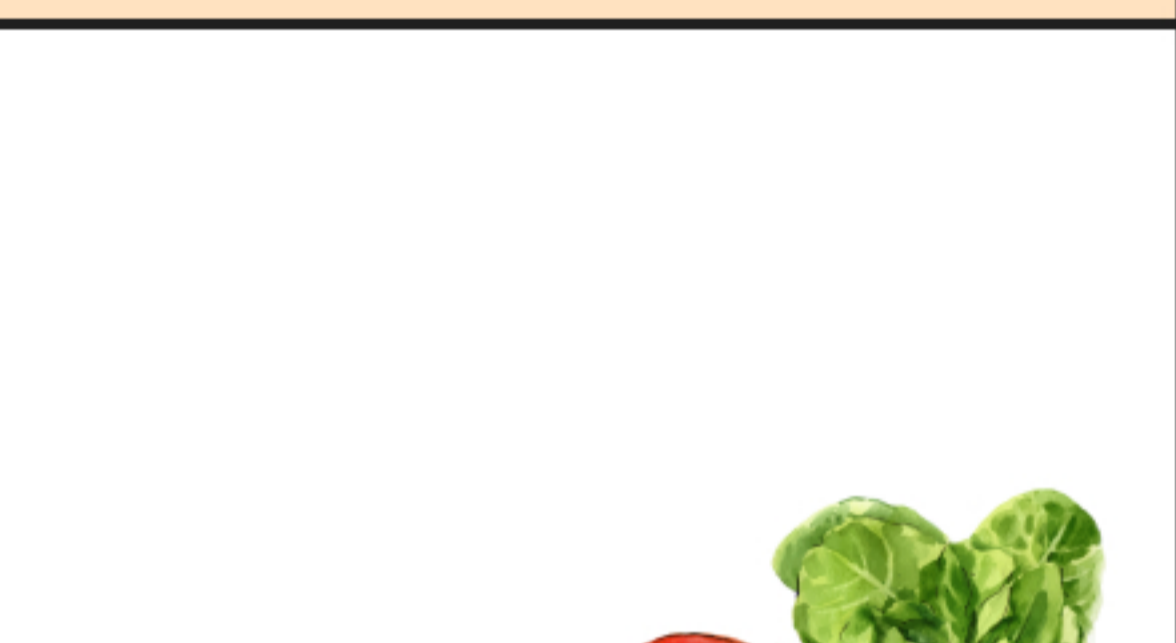

- ✓ Avoid food waste
- ✓ Eat less meat
- ✓ Buy local food

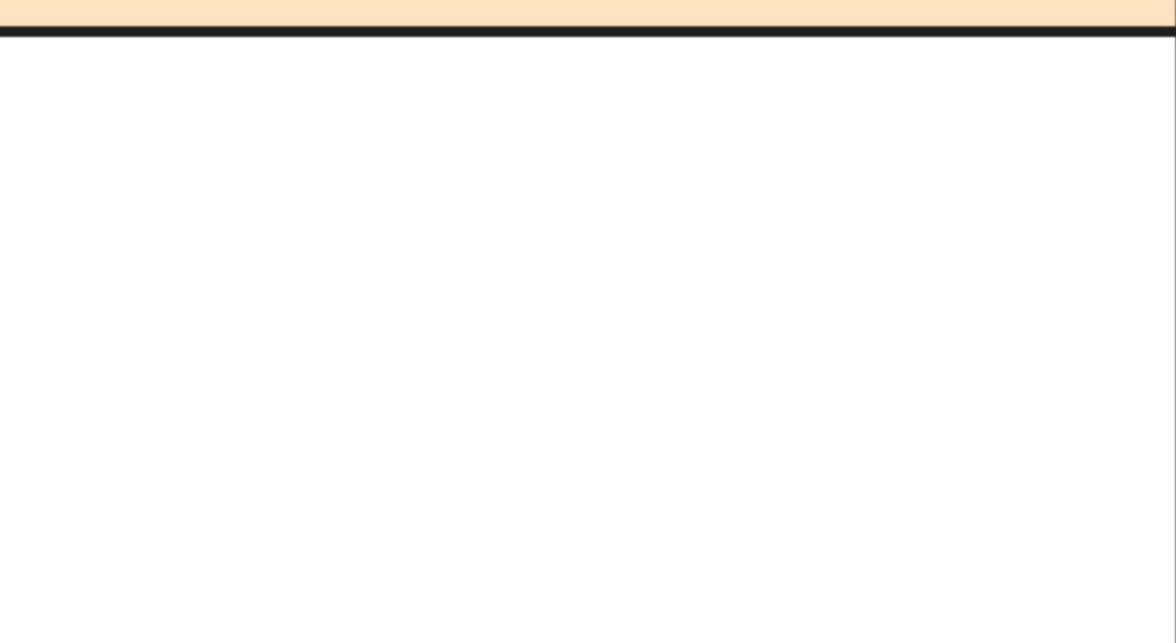

You encouraged your family to learn vegan recipes and reduce meat consumption. **Move up 1 field.**

You joined a community garden project together with another player. **You both move up to the next empty field of your choice.**

You accepted plastic bags while shopping instead of bringing a reusable one. **Move down 1 field.**

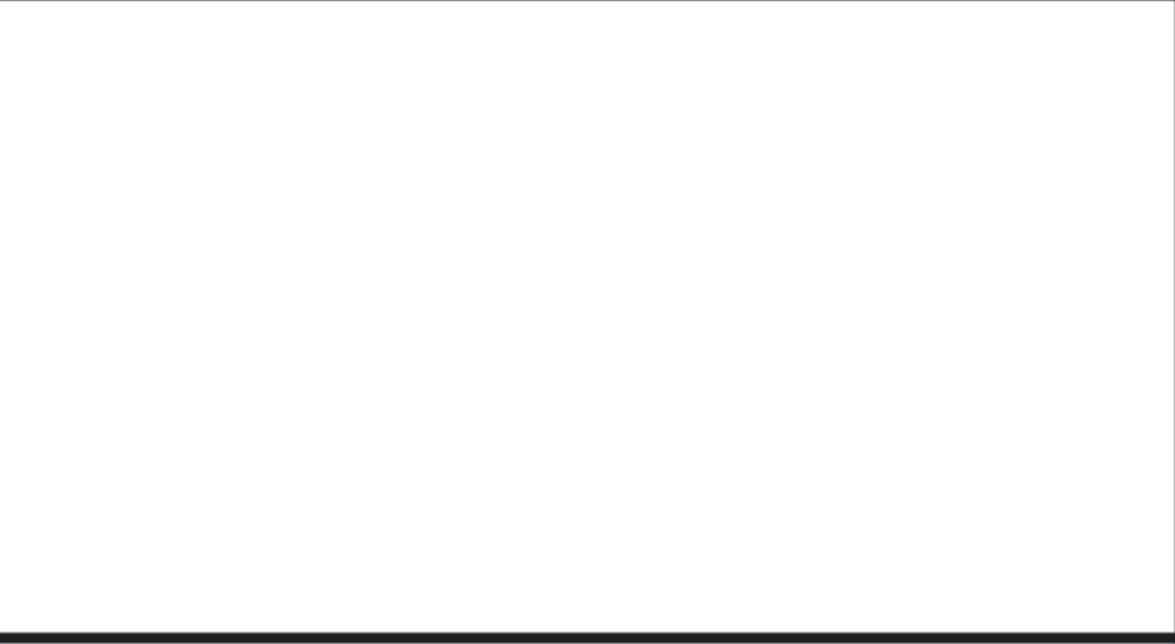

You bought local, seasonal food. **Move up 1 field!**

Transportation

How we travel is important to save the Planet.

- ✓ Choose to walk
- ✓ Ride your bike
- ✓ Use Public Transportation

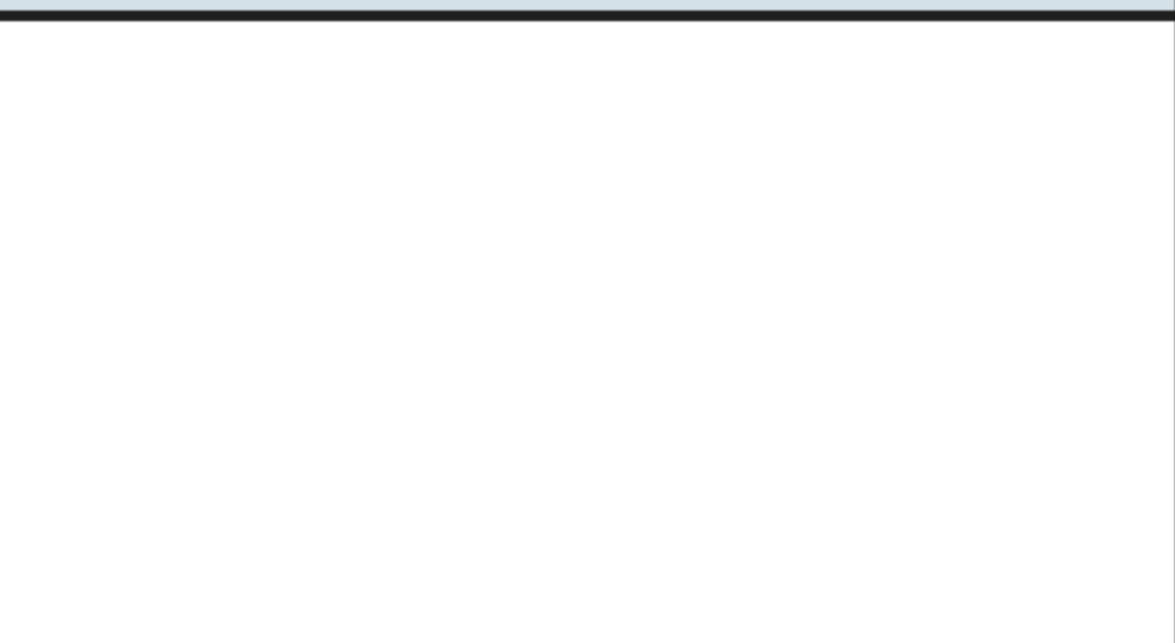

You gave a presentation at school about electric vehicles and made a poster for everyone to remember the key points. **Move up 1 field.**

You used your bike to ride to school instead of asking to be taken by car. **Move up 1 field.**

Your family takes the plane for a trip you could have done by train. **Miss a turn.**

You used public transportation often this week! **Roll again.**

Energy

Energy to heat or cool your home and power electronic things is important.

- ✓ Use as little energy as possible
- ✓ Learn about renewable energy

You left your mobile charger plugged in. **Go back 2 fields.**

Great, your home is powered with renewable energy. **Roll again.**

It's cold and you turn up the heater instead of putting on a sweater. **Go back 2 fields.**

You left the air conditioner on while leaving the house. **Move down two fields.**

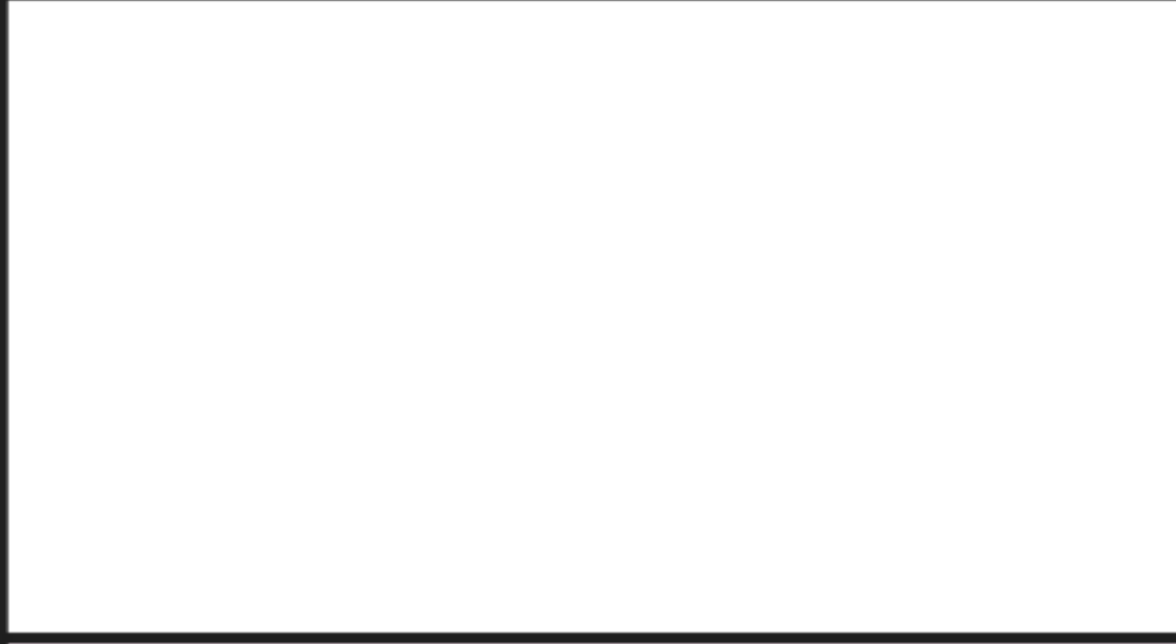

Your home is not well insulated. **Miss a turn.**

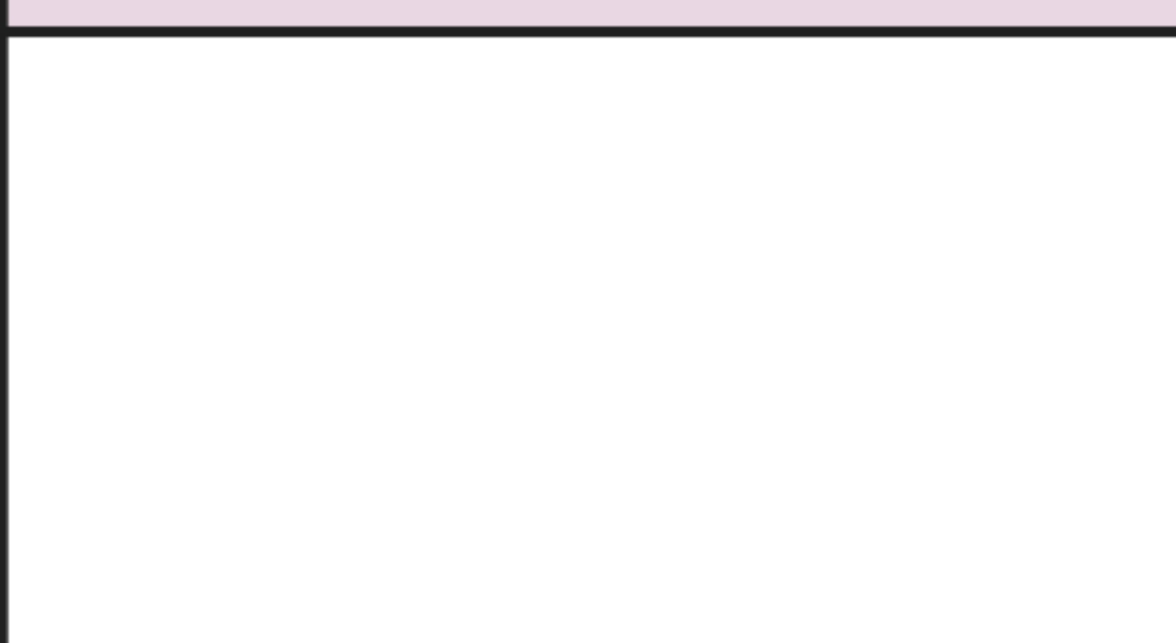

Manufacturing

How we produce and consume things matters.

- ✓ Ask where and how they're made
- ✓ Consider if you really need them
- ✓ Repair rather than replace

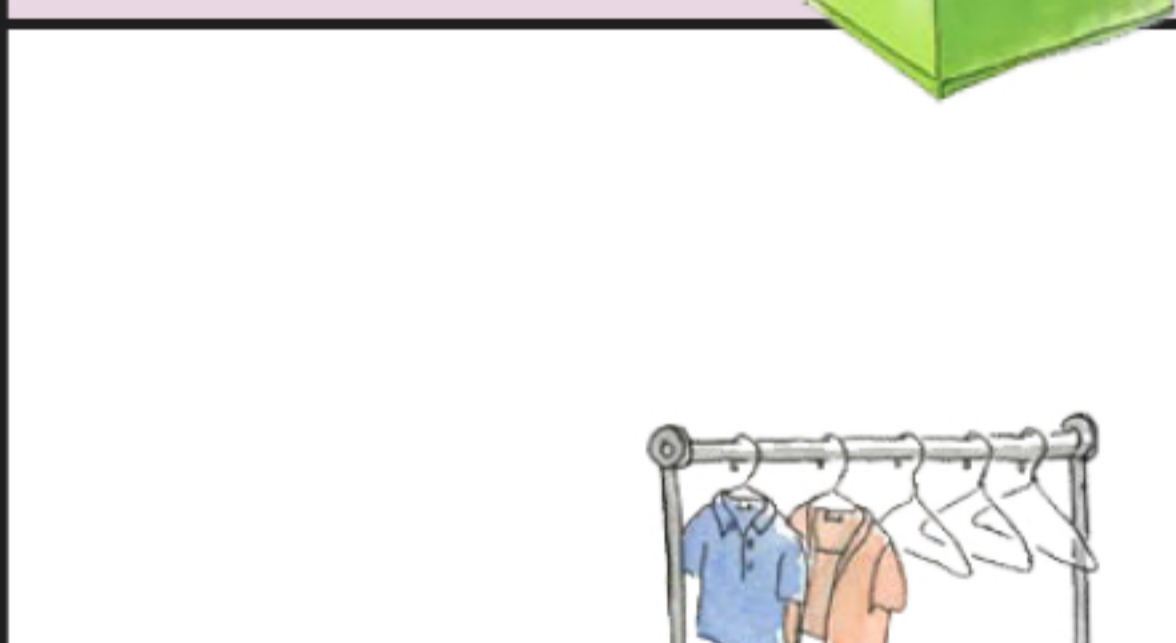

A landslide has destroyed a crop field near you. **Go back to "START"**

A furniture manufacturer in your town replanted a forest and helped reverse a drought. **Move up 1 field.**

You recycle your waste. **Move up 1 field.**

You bought an ethically produced T-Shirt from a 2nd hand store. **Move up 1 field.**

Dreams

- What are your wishes, hopes, ideas, and dreams for a Net Zero Future?
- How would you like to live in 10 or 20 or 30 years from today?
- How do you imagine helping achieve these dreams?

Nightmares

- What worries you thinking about the future of our planet?
- What other things would you like to address?
- How would you like to combat these nightmares?
